

At the forefront of transforming the sharing economy, ivault™ introduces a groundbreaking application leveraging blockchain technology to encourage the reuse of goods.

ivault™ is the sharing app that rewards sustainable behaviour. It empowers anyone to **rent, borrow and lend** items from their peer-to-peer community. It is the rewarding alternative to buying new – with zero risk to privacy.

The ivault™ app makes sharing simple, intuitive and fun. Members learn about the positive impact of their greener lifestyle, and **earn rewards**; cash and ecopoints which can be traded for Tokens.

All items are registered and verified with our **patented blockchain-based technology**. Blockchain provides immutable time-stamped proof of ownership, which means that no one can hack or manipulate a member's proof of ownership.

Aligned with eco-conscious values, ivault™ is steered by a seasoned team, including the co-founder of Bitcoin Suisse, a Cardano board member, and a CEO with a robust background in investment banking. Together, they lead ivault™ towards a future where sharing and sustainability aren't just ideals but tangible, actionable realities.
